Assistant Manager Process Engineering Department

I have had nearsightedness since I was in elementary school. I remember not seeing the blackboard clearly. I had to keep blinking or rubbing my eyes in order to see things clearer. My mother took me to get an eye examination. I later found out that those were the symptoms of nearsightedness. I got my first pair of eyeglasses from a general optical store that my mother took me to.

After graduating from university, my nearsightedness remained stable. As soon as I started my work life, I was looking for another pair of eyeglasses that would fit with my life and lifestyles better. Also, my first pair was broken so I needed a replacement. My nearsightedness level is rather severe so I wanted the new eyeglasses made with high quality. I did my research and came across ISOPTIK from the internet. After going through the information about the place and Master Bobis profile, I was confident that this was the place for me.

CVD measurement

When I decided to pay a visit to ISOPTIK, I sort of knew that the price for my new eyeglasses was going to be high. What I did not know, was the intricacy of how they conducted an eye examination! They offer the lenses and eyeglasses frame with the top class quality. The eye examination process
