

# acetate

L I N D B E R G <sup>COM</sup>

LBJ Como 2006

# origin

- acetate is developed from cellulose extracted from cotton
- it started as a substitute for horn and turtle shell which are very difficult to work with when manufacturing. the turtle shell from wild life is now prohibited to use for spectacles and products.

L I N D B E R G <sup>COM</sup>

# quality

- block material: very advanced structures and patterns with very deep and colourful effects.
- extruded material: very simple structures, one or more mono-coloured layers.

**extruded material is less expensive.....**

L I N D B E R G <sup>COM</sup>

# features
